ABOUT PAUL'S FAN COMPANY

Paul's Fan Company is a U.S. based manufacturer of custom-engineered axial and centrifugal ventilation systems, serving the mining, metals, industrial, and energy sectors. Backed by 65+ years of experience and legacy brands like Jeffrey and Champion, we deliver complete fan systems built for durability, efficiency, and reliable performance. Our capabilities include engineering, manufacturing, system integration, and commissioning—supported by ISO 9001:2015 certification and proven project experience in both government and private sectors.

CAPABILITIES

Advanced Materials & Custom Fabrication

- Full in-house manufacturing of axial and centrifugal fans using stainless steels, duplex alloys, high-strength steels, wear-resistant overlays, and metals for extreme high temperature conditions.

Precision Manufacturing Excellence

- CNC machining, Hypertherm cutting, computer-controlled forming, certified expert welding, and hand-fabrication capabilities for complex, application-specific designs

CAPABILITIES, CONT.

Material Science Expertise

- 65+ years of engineering experience with alloy selection, thermal management, and corrosion/abrasion resistance to extend equipment life and improve operational uptime.

Specialized Applications

- Fans engineered for extreme-duty environments: corrosive gases, abrasive particulate, high-heat, variable temperature, and underground conditions—integrated with custom blade liners, scroll liners, cooling slingers, and heat shielding.

System Integration & Total Lifecycle Support

- Design, manufacture, commissioning, and lifecycle support for turnkey ventilation systems used in mining, tunneling, metals, recycling, and heavy process industries.

DIFFERENTIATORS

True Manufacturer, Not a Retrofit Shop

- Complete new-build fan systems designed and fabricated in-house to exacting standards.

Material & Design Capabilities Others Cannot Match

- Proven track record delivering custom-engineered fans with advanced alloys and extreme-duty features where standard OEMs fail.

Reduced Total Cost of Ownership

- Fans that run longer, reduce maintenance intervals, and minimize downtime—extending operational lifespan in the most demanding environments.

Legacy Engineering + Modern Innovation

- Proven design foundation from Jeffrey and Champion fans combined with modern manufacturing, precision analysis, and ISO 9001:2015 certified processes.

Proven Government & Industrial Supplier

- Extensive experience supplying U.S. and North American industrial markets, meeting federal quality and procurement standards.

WORK WITH PFC?

When you work with Paul's Fan Company, you gain more than a supplier—you gain a long-term partner.

We bring over 65 years of hands-on engineering experience and the manufacturing strength to deliver custom fan systems and manufactured components that outlast and outperform.

From underground mining to extreme industrial environments, our products are built to solve the problems others can't.

We don't just deliver equipment—we stand behind every system with ongoing support, field service, and a commitment to your uptime, safety, and efficiency.
